AB - J07242798 The coating compsns. are thermosetting resin compsns. contg.

(a) thermosetting resins contg. reactive unsatd. bonds, (b) epoxy resins, (c) N-contg. epoxy resin hardeners or polycarboxylic acids or polymercaptans, (d) silane couplers contg. functional gps. having chemical reactivity with (b) or (c), and (e) inorganic colouring pigments, flaky inorganic fillers or minerals having a Mohs hardness of 5-10.

- (a) are pref. epoxy acrylate resins or urethane acrylate resins; (b) are pref. bisphenol A epoxy resin having Mn of below 1000 and epoxy equiv. of at least 100 and below 250; (c) are pref. straight chain aliphatic diamines, alicyclic dicarboxylic acid anhydrides or 1,2-propanedithiol; (d) are pref. trialkoxysilane cpds. The resin compsns. contain 10-70 (15-50) wt.% of (a) and 10-80 (15-75) wt.% of epoxy components ((b) and (c)). 0.5-10 (1-5) pts. (wt.) of (d) are used per 100 pts. of resin components. The coating compsns. have viscosities of below 1000 cps.

- USE - As coating materials for intra-mould coating-moulding.

- ADVANTAGE - The coating compsns. contain epoxy resins having high toughness and fine impact resistance and form coated layers having good impact resistance and adherence to bases.
